This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. If the device is not installed and used in accordance with the instructions, it may cause harmful interference to radio communications and void the user’s authority to guarantee the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Modifications not expressly approved by the manufacturer could void the user’s authority to operate the equipment under FCC rules.

Congratulations on your purchase of the White Finger optical compressor! The White Finger is a warm sounding pedal useful for both guitar, bass and home recording. This pedal features optical compression and an FET signal path. Reading these instructions carefully will ensure that you will get the most out of your White Finger.

**WARNING:** Use only the 40VDC/100mA AC adapter the White Finger comes supplied with. Do not use any other AC adapters. Using other AC adapters, even those made by Electro-Harmonix, could cause harm to the unit, the adapter or you. The White Finger does not use batteries.

**- THEORY OF OPERATION -**

Optical compressors work by treating an incoming signal with an optically controlled attenuator (a type of volume control) comprised of a fixed resistor and a shunt opto-coupled photocell. Because this attenuator is passive, as opposed to the more common active AGC (Automatic Gain Control) compressor circuits, it doesn’t add an electronic signature to the signal, thus preserving the tone and character of the original sound.

The White Finger is a fixed threshold compressor, meaning the threshold remains constant while you have the ability to change the amount of the signal that goes to the compressor circuitry. The signal level sent to the compressor is controlled by both Pre-Gain and Compress knobs. Some gain is needed to adjust the output level so that it matches the original level and this is accomplished with an FET fixed gain pre-amp circuit. In general, compressors are used to sustain melody lines, minimize changes in signal level or add a forward percussive effect to both instruments and drums.

**- CONTROLS -**

**Compress Knob** — Varies the amount of compression from minimum (counter-Clockwise) to maximum (clockwise).

**Sensitivity Knob** — Changes the characteristic of the compression. As the knob is turned clockwise, the compression effect becomes more dramatic and percussive.
Lamp/LED Switch – Selects the light source to drive the optical attenuator. The LED is very fast and flat in frequency content. Choose this setting for straight-ahead compression effects and sustain. Choose LAMP for slow attack and a reduced compression on the treble content. This is great for funk chord playing, voice and keyboards. Thick and widely adjustable.

SQSH/NORM Switch – Selects between normal attack and a “squashed” long attack time for the attenuator. This directly affects only the LAMP setting but you will see a reduction in compression if you leave SQSH on while in LED mode.

Pre-Gain knob – Adjusts the Output level of the signal.

Compression Level LED – Gives a visual indication of the gain reduction caused by the compressor. The brighter the LED is, the greater the compression.

Status LED – Lights up when the White Finger effect is engaged. If the STATUS led is off, the unit is in true bypass mode. The footswitch engages/disengages the effect.

INPUT Jack – This ¼” jack is the audio input to the White Finger.

DIRECT OUTPUT JACK – This ¼” jack is connected directly to the input Jack so that the Input signal is always available.

OUTPUT JACK – This ¼” jack is the audio output from the White Finger. When the White Finger is in Bypass mode, the output jack is connected directly to the INPUT jack.

- WARRANTY INFORMATION -
Please register online at http://www.ehx.com/product-registration or complete and return the enclosed warranty card within 10 days of purchase. Electro-Harmonix will repair or replace, at its discretion, a product that fails to operate due to defects in materials or workmanship for a period of one year from date of purchase. This applies only to original purchasers who have bought their product from an authorized Electro-Harmonix retailer. Repaired or replaced units will then be warranted for the unexpired portion of the original warranty term.

If you should need to return your unit for service within the warranty period, please contact the appropriate office listed below. Customers outside the regions listed below, please contact EHX Customer Service for information on warranty repairs at info@ehx.com or +1-718-937-8300. USA and Canadian customers: please obtain a Return Authorization Number (RA#) from EHX Customer Service before returning your product. Include with your returned unit: a written description of the problem as well as your name, address, telephone number, e-mail address, and RA#; and a copy of your receipt clearly showing the purchase date.
